

**Aim:**

Program to add 'ing' at the end of a given string. If it already ends with 'ing', then add 'ly'.

**Algorithm:**

```
str1 = "come"  
def add_string(str1):  
    if (str1.endswith('ing')):  
        str1 += "ly"  
    else:  
        str1 += "ing"  
    return str1  
  
print(add_string(str1))
```

**Output:**
